Company History and new Targets

CPE is a family company founded in 1978 and established in Milan, Italy.

The business started as a trading company of connectors and cables, addressing defense and telecommunication.

After a few years of activity, transforming from a trading to a manufacturing company was an organic and natural progression, thus pursuing high specialization in harness assembly and connector production. Since the spirit of CPE ITALIA has always been and will always be to assist the "client ally", constant growth was sustained by the founder of the company by opening new production sites all over the world. CPE ITALIA is now a Group of about 400 people with production facilities in Brazil, China, Italy, Mexico, Romania, branch offices in North America and India, headquarters in Milan.

With profound knowledge of and years of experience in multiple sectors like Defense, Broadcasting, Communication Infrastructure, Medical, Transportation, Nuclear, Oceanographic Installations, CPE supports its client-focused ideology with the development of solutions tailored to each and every client's needs.

We like to imagine our behavior and capability results similar to these of the well known "**Tricolor Arrows**" pilot team:

attentive to the rules guidelines, organization and discipline
total security as top priority quality
amaze and engage Innovation and results that exceed customer expectations

40 YEARS INSIDE CONNECTIVITY MARKET

Digital Modular Connector 5.5 System

The CPE DMC 5.5 (Digital Modular Connector 5.5) is a customizable rectangular connector, which each customer can build according to his needs, depending on the number of the requested connections and current carrying capacity.

It uses the same philosophy of the 'Digital Building': elementary bricks connected to obtain a complex building. The DMC 5.5 consists of different types of plastic building blocks, with several types of contacts, in the same metallic frame. Each block, depending on its size, can contain a different number of pins or socket contacts. The socket hyperboloid shaped contacts increase the reliability of the connector and its current carrying capacity, ensuring a high mate / demate duty cycle and an extraordinary resistance to shock and vibration.

All these characteristics make the DMC 5.5 useful especially for military or railway environments, where telecom or data exchanging applications are necessary.

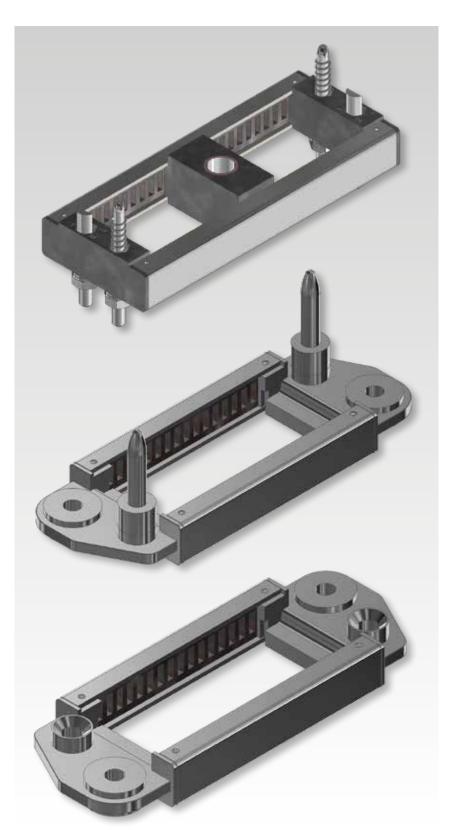

CPE developed plastic modules with 2, 3, 5, 17 contacts. and modules with 9 or 30 contacts are developed on request. The plastic blocks can accommodate two families of contacts: soldered contacts for cables or PCBs and crimped contacts for cables, each one with its own current carrying capacity.

CONNECTOR REQUIREMENTS:

- General Requirements: EN 45545; MIL-STD-1344; NF F16-101
- Operating Temperature: from -65°C to + 125°C
- Fire Testing: Classification: I2/F1
- Humidity: MIL-STD-1344 Method 1002 (EIA-364-31 procedure)
- Temperature Cycling: MIL-STD-1344 Method 1003 (EIA-364-32 procedure)
- Salt Spray: MIL-STD-1344 Method 1001 (EIA-364-26 procedure)
- Vibration: MIL-STD-1344 Method 2005 (EIA-364-28 procedure)
- Mechanical Shock: MIL-STD-1344 Method 2004 (EIA-364-27 procedure)
- Solderability (when applicable): IPC/EIA J-STD-002, category 3

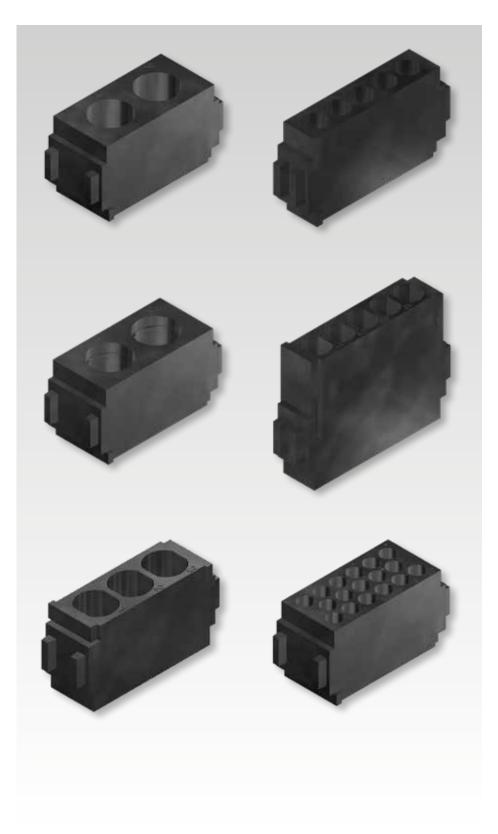

DMC 5.5 Frame

Each CPE DMC 5.5 frame consists of two rails and two end caps. The more complex version uses jack screws, hoods, cable clamps and coupling rods. It can be customized according to the needs and applications of the customer and provided with lengths in multiple of steps equal to 5.5 mm.

Insulator

CPE develops different types of insulator blocks for accommodating different numbers of contacts: 2, 3, 5, 17 contacts as standard and 9, 30 contacts on customer request. The pictures/images shows some blocks.

They are made of Nylon with glass reinforcement and are placed in the aluminium frame.

DMC 5.5 Contacts

Each CPE DMC 5.5 plastic module can accomodate two different type of male / female contacts: solder type and removable crimp type (clip, cloc). The female contact use the HYPERBOLOID technology. The distinguishing feature of the HYPERBOLOID socket is the hyper-boloidshaped sleeve formed by straight wires strung at an angle to the longitudinal axis. Viewed from the side, you see a curve defined by a series of apparent short straight line segments which are tangent lines to points along a hyperbolic curve. This geometry provides for a design which has a decreasing circumscribed circle when viewed from the entry. It begins larger than the pin acceptance diameter and is less than this same diameter at the center. When the pin is inserted into this sleeve, the wires stretch, well within elastic limits, to accommodate it. In so doing, the wires wrap themselves around the pin providing a number of continuous line contact paths.

- VLIF (Very Low Insertion Force)
- Extraordinary Resistance to Shock & Vibration.
- Duty Cycle Exceeding 100,000 Mate/ Demate.
- Low Contact Resistance.
- Improved Current Carrying Capacity.
- Highest Reliability.

Different contact diameters used are: 1 mm, 1.2 mm, 1.5 mm, 2.5 mm and 3.5 mm. CPE provides soldered contacts for cables or PCBs and removable crimped contacts for cables, each one with its own current carrying capacity. Tables 1, 2, 3 show some electrical and mechanical characteristics of the used contacts.

EXAMPLE Crimp Contact «CLOC»

Material and Finishing Specifications

INSULATING MODULE

Polyamide 66, 25% glass filled, black color, UL94 V0 classified, compliant with EN 45545-2 (Hazard Levels HL1 – HL2 – HL3, for requirement sets R22 and R23) and NF F16-101 (Classification: I2/F1).

Or

Polyphenylenesulphide (PPS), 40% glass reinforced, black color, type BST-40F in accordance with MIL-M-24519.

FRAME

- Rail: Stainless Steel AISI 303 (ASTM-A-582)
- HeaderBlock:

Zinc Alloy ZAMA G-Zn Al4 per UNI EN 1774

Or

Polyamide 66, 25% glass filled, black color, UL94 VO classified

∩r

Polyphenylenesulphide (PPS), 40% glass reinforced, black color, type BST-40F in accordance with MIL-M-24519.

- Guiding Pin: Brass CuZn39Pb3 finished with white Chrome CR3 on 12-15 µm Zn
- Coded Guide: Brass CuZn39Pb3 (CW614N per EN 12164), finished with white Chrome CR3 over 5-7 μm Zn per QQ-Z-325 type 2 class 3 (ASTM-B-633 Type 2)
- Guiding Floating Header Block: Zinc Alloy ZAMA G-Zn Al4 per UNI EN 1774
- Floating Washer: Brass CuZn39Pb3 finished with white Chrome CR3 on 12-15 µm Zn
- Modules Positioner: Polyamide 66, 25% glass filled, black color, UL94 V0 classified, compliant with EN 45545-2 (Hazard Levels HL1 – HL2 – HL3, for requirement sets R22 and R23) and NF F16-101 (Classification: I2/F1).

HYPERBOLOID SOCKET CONTACT

- Elastic element (Wires):
 - Standard

Berillium-Copper (CuBe per ASTM B 197) or Phosphor – Bronze (CuSn6P) per ASTM B139 plated with Gold, 0.25 μ m, over Nickel, 2 μ m, per SAE AMS-QQ-N-290, class 1, over Copper, 1 μ m, per SAE-AMS-2418 or ASTM B734

Military

Berillium-Copper (CuBe per ASTM B 197) or Phosphor – Bronze (CuSn6P) per ASTM B139 plated with Gold, 1.27 μ m, per ASTMB488 Type II, Class 1.27, Code C, over Nickel, 2 μ m, per SAE AMS-QQ-N-290 over Copper, 1 μ m, per SAE-AMS-2418 or ASTM B734

- Inner Sleeve, Front Sleeve: Brass according to ASTM-B-455 Alloy UNS C38500, Rif. ISO CuZn39Pb3 ,plated with Nickel, 2 μ m, per SAE AMS-QQ-N-290 class 1 , form SD, over Copper, 1 μ m, per SAE AMS 2418 or ASTM B734
- Rear Tail:
 - a) Dip solder and solder cup: Brass per ASTM-B-455 Alloy UNS C38500,
 Rif. ISO CuZn39Pb3, plated with Gold, 0.15 μm, per ASTM-B-488- type II grade
 C, over Nickel,2 μm, per SAE AMS-QQ-N-290, class 1, over Copper,1 μm,
 per SAE-AMS-2418 or ASTM B734
 - b) Crimp Termination: Brass per ASTM-B-121 Alloy UNS C35300, Rif. ISO CuZn35Pb2, plated with Gold, 0.15 μm, per ASTM-B-488- type II - grade C, over Nickel,2 μm, per SAE AMS-QQ-N-290, class 1, over Copper,1 μm, per SAE-AMS-2418 or ASTM B734

PIN CONTACT

- Standard
 - a) Dip solder and solder cup: Brass per ASTM-B-455 Alloy UNS C38500, Rif. ISO CuZn39Pb3, plated with Gold, 0.25 μm, per ASTM-B-488- type II - grade C, over Nickel, 2 μm, per SAE AMS-QQ-N-290, class 1, over Copper, 1 μm, per SAE-AMS-2418 or ASTM B734
 - b) Crimp Termination: Brass per ASTM-B-121 Alloy UNS C35300, Rif. ISO CuZn35Pb2, plated with Gold, 0.25 μ m, per ASTM-B-488- type II grade C, over Nickel, 2 μ m, per SAE AMS-QQ-N-290, class 1, over Copper,1 μ m, per SAE-AMS-2418 or ASTM B734
- Military
 - a) Dip solder and solder cup: Brass per ASTM-B-455 Alloy UNS C38500, Rif. ISO CuZn39Pb3, plated with Gold, 1.27 μm, per ASTM-B-488- type II - grade C, over Nickel, 2 μm, per SAE AMS-QQ-N-290, class 1, over Copper, 1 μm, per SAE-AMS-2418 or ASTM B734
 - b) Crimp Termination: Brass per ASTM-B-121 Alloy UNS C35300, Rif. ISO CuZn35Pb2, plated with Gold, 1.27 μ m, per ASTM-B-488- type II grade C, over Nickel, 2 μ m, per SAE AMS-QQ-N-290, class 1, over Copper, 1 μ m, per SAE-AMS-2418 or ASTM B734

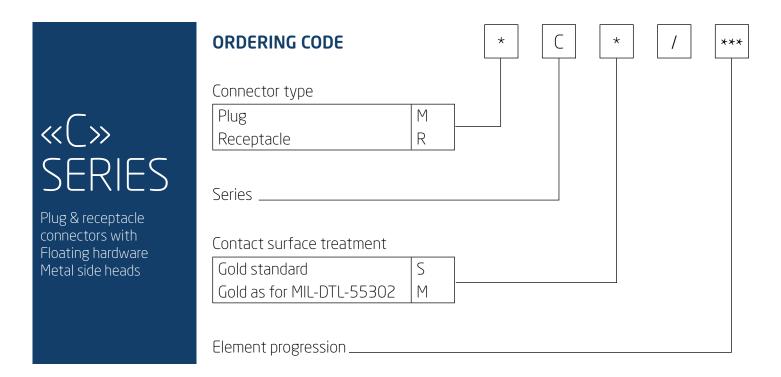

PLASTIC HOOD

Polyamide 66, 25% glass filled, black color, UL94 V0 classified. Compliant with EN 45545-2 (Hazard Levels HL1 – HL2 – HL3, for requirement sets R22 and R23) and NF F16-101 (Classification: I2/F1).
